SmartFarmer - IoT Enabled Smart Farming Application

What do they THINK and FEEL?

It can help farmers to manage farms efciently with better solutions provided

There is a struggle in making the connection between the hardware and software while there is a wide gap in interfacing both

This project helps farmer to improve their maintenance of their crops

What do they HEAR?

The idea of this project will make easier to farmer to make more yield in their feld

Its helps in making proft and growth towards the agriculture industry

This project gives more proft with less work and improves the agriculture technology

What do they SEE?

It is just maximizing the use of resources and decreasing the environmental impact

From this project the farmer can see the contents of the plant needs for example water content, temperature etc..

They can see the better productivity and better proftInsert text here

What do they SAY and DO?

The aim of the project is to offer assistance to farmers to get data for efficient farming

This project is to help the farmers and it upgrades the new technology

The aim of our project is to give better productivity and better solutions

PAINS

There is a difculty in doing several things that may affect the project

There is a complexity to determine certain constraints

GAINS

This gives a great success for the future towards the improvement of agriculture feld

Remote monitoring is a major gain for the farmers
